

Types of Services

- ◇ Community Psychiatric Support Treatment (CPST)
- ◇ Therapy
- ◇ Prevention Services

Services

Community Mental Health Services are provided in the school setting to meet students in an environment that is natural, minimizing the stigma associated with mental health service and to minimize the barrier of transportation that often prevents youth from receiving the services they need. The services are designed to promote positive mental health, provide early identification of psychological and social problems to reduce non-cognitive barriers to learning, and reduce the risk factors associated with school failure. Specialists work with students to develop effective coping skills, reduce problem behavior and achieve school success. Services may also be provided in the home, office or community setting when indicated.

Types of Services

Providers determine the need, level and type of service that is most appropriate for an individual through their initial contact with a student and the referral source.

Community Psychiatric Supportive Treatment (CPST)

The purpose of this service is to provide goal oriented and individualized services for each person served. CPST services are focused on helping individuals succeed in the community; to identify and access needed services; and to help them show improvement in school, work, or family and make contributions within the community. Guardian participation is required.

Therapy

Individual and group services are provided by licensed therapists in the school setting. These services are provided to students with intensive needs, focused on helping students manage behavioral and emotional issues interfering with their learning. Participation from guardians is required and services will continue through the summer.

Prevention

Providers collaborate with building level teams to assess the prevention needs in each school building. Prevention services are designed to reduce the incidence, prevalence or severity of mental or emotional issues. Prevention also provides early identification and referral to other services. Prevention services may address topics such as: adjustment issues, bullying prevention, peer pressure, self-esteem, stress management or suicide prevention.

Consultation

Collaboration with other professionals in an individuals life is essential to achieving emotional, behavioral, and academic success. Providers work with individual teachers, administrators and groups of professionals to develop interventions in a variety of settings. Professional development may address topics such as: suicide prevention, Mental Health First Aid, recognizing and responding to emotional issues, trauma informed practices and much more.

Billing for Services

Services provided can be billed to Medicaid, private insurance or directly to the family.
